

BETASHARES GEARED HEDGE FUND SERIES ASX: GEAR & GGUS

An investment in the BetaShares Geared Fund Series provides investors with a simple way to obtain a cost-effective geared exposure.

The BetaShares Geared Fund Series aims to provide investors with geared exposure to a diversified portfolio of shares as simply as buying any share on the ASX. Both funds are internally geared, which means investors do not need to take out margin loans and do not have the possibility of margin calls in relation to their investment. Gearing in the funds in the Series will be managed between 50-65%, allowing the potential for investors to access greater returns and performance relative to an ungeared exposure. More specifically:

- The BetaShares Geared Australian Equity Fund (Hedge Fund) (**ASX: GEAR**) provides investors with geared exposure to the returns of the Australian share market
- The BetaShares Geared U.S. Equity Fund - Currency Hedged (Hedged Fund) (**ASX: GGUS**) provides investors with geared exposure to the returns of the U.S. share market

What is Gearing?

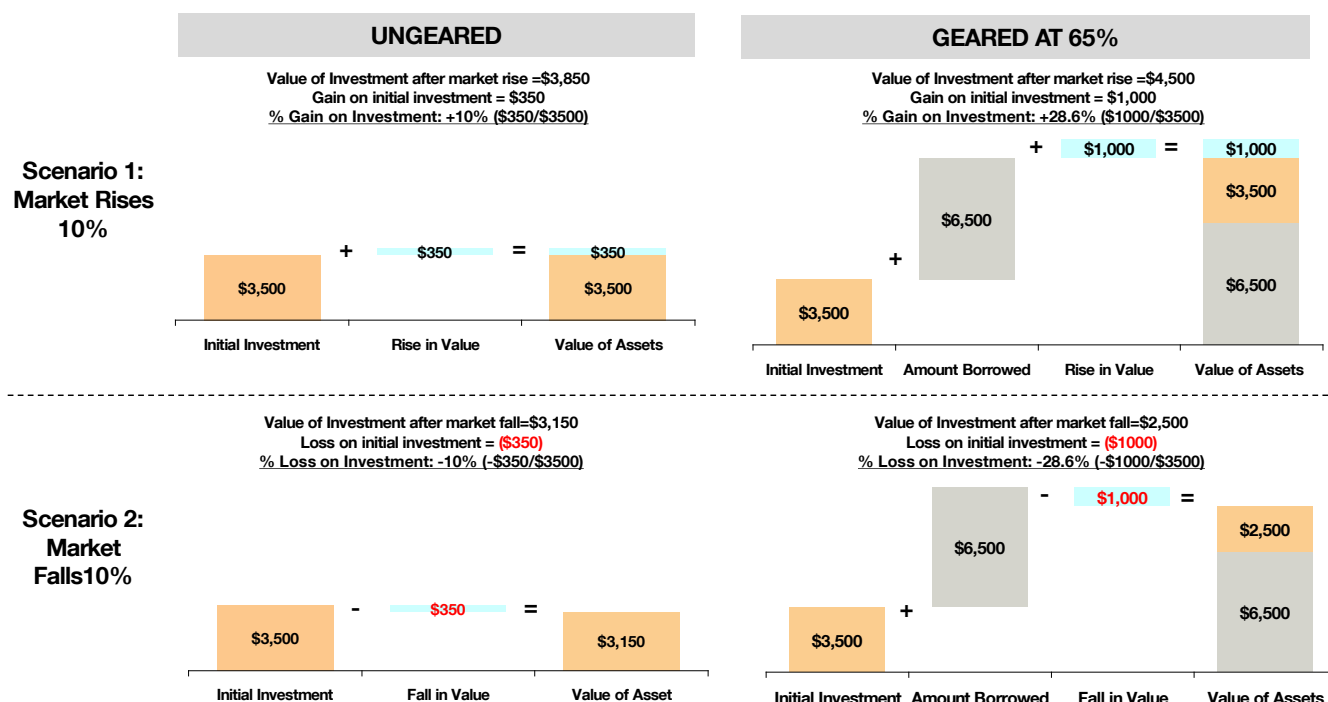

As the below exhibit illustrates, gearing is an investment strategy whereby borrowed money is used to invest, along with an investor's own capital. Borrowing to invest makes the amount available for investing larger. Both Funds in the Series are internally geared' which means that the Fund itself has entered into a borrowing arrangement – this means that investors are not exposed to the possibility of margin calls as all borrowing obligations are met within the Fund. In addition, the Fund uses its capacity as wholesale investor to borrow at significantly lower interest rates than those available directly to individual investors.

ILLUSTRATION OF A 'GEARED' INVESTMENT STRATEGY (ASSUMING 60% GEARING RATIO)

Gearing ratio = total amount borrowed expressed as a percentage of the total assets of the Fund

Borrowing to invest will be profitable if the returns generated on the geared investment are higher than the cost of investing (including interest on the borrowed funds). As such, should the investment increase in value, the gains on the investment in a geared investment will be magnified compared to a non-geared strategy. Should an investment decrease in value, the losses on the investment in a geared investment will also be magnified compared to a non-geared strategy. The example below shows how gearing can magnify both the gains and losses on investments:

BETASHARES GEARED HEDGE FUND SERIES ASX: GEAR & GGUS

Gearing magnifies gains and losses and may not be a suitable strategy for all investors. Investors in geared strategies should be willing to accept higher levels of investment volatility and potentially large moves (both up and down) in the value of their investment. Geared investments involve significantly higher risk than non-geared investments and investors should seek professional financial advice before investing, and monitor their investment actively. Note that the Series does not track a published benchmark and past performance is not an indication of future performance.

Product Structure & Investment Strategy

The BetaShares Geared Australian Equity Fund (Hedge Fund) is a registered managed fund (i.e. unit trust) that trades on the ASX.

GEAR will implement the investment strategy by combining funds received from investors with borrowed funds, and invest the proceeds in a broadly diversified share portfolio. The share portfolio consists of the largest 200 equity securities listed on the ASX weighted by market capitalisation (as measured by the S&P/ASX 200 Index). The Fund is expected to earn dividends and franking credits on the underlying share portfolio.

The BetaShares Geared U.S. Equity Fund - Currency Hedged (Hedged Fund) is a registered managed fund (i.e. unit trust) that trades on the ASX.

GGUS will implement the investment strategy by combining funds received from investors with borrowed funds, and invest the proceeds in a broadly diversified share portfolio. The share portfolio consists of the largest 500 equities securities listed in the U.S., weighted by their market capitalisation.

Gearing Strategy

Funds in the Series are 'internally geared', which means that as part of the investment strategy, the Funds will use borrowed funds to provide geared exposure to the returns of the Australian or U.S. share market. Being internally geared allows the Funds to use its capacity as a wholesale investor to borrow at competitive interest rates. Also, due to this structure, investors do not need to apply for loans to obtain geared exposure or pay 'margin calls' in market downturns, as all gearing obligations are met within the Funds. At the time of writing, the Funds have an established loan facility with Deutsche Bank AG.

The gearing ratio within both Funds (the total amount borrowed expressed as a percentage of the total assets of the Funds) will be managed between 50-65%. Gearing levels will be actively monitored and adjusted to stay within this range, with the latest gearing level published and updated daily on the BetaShares website. If through market movements the gearing ratio exceeds 65% or decreases below 50%, the Fund will aim to bring the ratio back towards the middle of the gearing range by selling Fund assets and repaying borrowing, or conversely, by increasing the level of borrowing and buying additional Fund assets.

In addition, the Fund's Series portfolio management team will monitor gearing levels and income from the underlying share portfolios with the objective of ensuring that the income from the underlying share portfolios is sufficient to meet the borrowing costs (i.e. so that the Fund will be 'positively geared'). Should expected income not to be sufficient to meet borrowing costs, the Funds may decrease the gearing ratio by selling Fund assets and repaying a portion of the borrowings.

Ease of Access

The ASX-traded BetaShares Geared Hedge Fund Series provides a simple to access, cost-efficient way to obtain geared exposure to a broad portfolio of Australian or U.S. equities. Current alternatives may variously involve higher levels of downside risk, more complicated administration or higher borrowing rates. The table below summarises the primary differences:

	BETASHARES GEARED FUND	MARGIN LOANS	LISTED WARRANTS
GEARING LEVELS	50-65% - set by Fund	Customisable by investor	Set by issuer – typically between 50-90%
ACCESS	Bought and sold like a share	Requires loan agreement, credit checks	Requires client agreement form
DOWNSIDE RISK	Limited to capital invested	Unlimited – recourse to client	Limited to capital invested
DIVERSIFICATION	HIGH – broadly diversified share portfolio, largest 200 shares on ASX by market cap	Varies depending on underlying exposure	Varies depending on underlying exposure
MARGIN CALLS	No margin calls for investors	Yes – investors can experience margin calls	No margin calls for investors
BORROWING COST	Access to wholesale funding rates	Retail funding rates	Retail funding rates
POTENTIAL FOR INTEREST DEDUCTIONS	Yes – interest costs reduce taxable distributions to investors	Yes	Yes
INVESTOR ABILITY TO PRE-PAY INTEREST	No	Yes	Yes – included in purchase price
ISSUER CREDIT RISK	No	No	Exposed to full counterparty risk of issuer
SUPER FUND/ SMSF ELIGIBLE	Yes	Generally not	Yes

BETASHARES GEARED HEDGE FUND SERIES ASX: GEAR & GGUS

Benefits of the BetaShares Geared Hedge Fund Series

- Cost Effective - management fee lower than most geared fund alternatives
- Wholesale Funding - Fund uses its capacity as wholesale investor to borrow at significantly lower interest rates than those available directly to individual investors
- SMSF Eligible - a means to access gearing in SMSFs/super as a component of a diversified portfolio
- No Margin Calls for investors – gearing obligations met by the Funds with no further recourse to the investor and no need for investors to provide collateral as security
- Performance - potential for greater returns
- Access - Administrative ease compared to other alternatives providing gearing – no need for margin loans, application forms or credit checks
- Diversification – broadly diversified portfolio of shares representative of the Australian or U.S. share market, assisting with risk management of a geared investment
- Transparency – gearing ratio and underlying share portfolios available on website and updated daily
- Liquid - buy or sell throughout the day like any share on the ASX

Uses of the BetaShares Geared Hedge Fund Series

An investment in either GEAR or GGUS is a simple way to implement a cost-effective geared investment strategy. It seeks to be positively geared and may be suitable for a number of strategies. Examples include:

- Increasing market exposure via an efficient use of capital
- Accessing the potential tax-effective investing
- Increasing exposure to the Australian or U.S. share market for SMSFs that have reached the concessional contribution cap
