

Betashares Geared Short U.S. Treasury Bond Fund - Currency Hedged (hedge fund)

ASX: BBFD

28 February 2025

Objective

BBFD seeks to generate magnified returns that are negatively correlated to the returns from 10-year US Treasury Bonds, hedged for currency exposure. The Fund expects to generate a magnified positive return when 10-year US Treasury Bond prices fall (bond yields rise) on a given day, and a magnified negative return when bond prices rise (yields fall) on a given day.

Strategy

BBFD is an 'inverse' geared fund. Its strategy of seeking negatively correlated returns is the opposite of traditional managed funds.

BBFD invests in cash and cash equivalents and sells 10-year US Treasury Note Futures to obtain a magnified (or geared) short exposure. The futures contracts reflect the returns of an underlying US Treasury Bond with 10 years to maturity.

BBFD's portfolio exposure is actively monitored and adjusted to stay within a -2.5x to -3x range on any given day. A 1% fall in the value of the bond on a given day can generally be expected to deliver a 2.5% to 3.0% increase in the value of BBFD (and a corresponding decrease if the value of the bond rises by 1%). BBFD's returns will not necessarily be in the range of -2.5x to -3x over periods longer than a day, due to the effects of rebalancing and compounding of investment returns over time. BBFD does not track a published benchmark.

Investors in geared strategies should be willing to accept higher levels of investment volatility and potentially large moves (both up and down) in the value of their investment. Gearing magnifies gains and losses and may not be a suitable strategy for all investors. Investors should seek professional financial advice before investing, and actively monitor their investment to ensure it continues to meet their investment objectives.

Benefits

Adjust your interest rate risk

You can use BBFD to make your existing fixed income portfolio less sensitive to movements in interest rates i.e. decrease your interest rate risk.

Leveraged exposure

BBFD gives you the opportunity to make magnified gains when the prices of 10-year US Treasury Bonds fall (bond yields rise) on a given day, as well as the potential for magnified losses when the prices of those bonds rise (bond yields fall).

Capital-efficient

BBFD provides a capital efficient way to gain geared short exposure to 10-year US Treasury Bonds.

Value of \$100 invested since inception

Source: Betashares, Bloomberg. **Past performance is not indicative of future performance.**

Fund returns are calculated in A\$ using net asset value per unit at the start and end of the specified period and do not reflect the brokerage or bid-ask spread that investors may incur when buying and selling units on the ASX. Returns are after fund management costs, assume reinvestment of any distributions and do not take into account income tax.

The daily interest rate earned on the fund's bank deposits is available on the Betashares website and is subject to change.

Asset allocation

This information has been prepared by Betashares Capital Ltd (ABN 78 139 566 868 AFSL 341181) (Betashares), the issuer of the Fund. It does not take into account any person's objectives, financial situation or needs. Investors should consider the appropriateness of the information taking into account such factors and seek financial advice. Before making an investment decision, investors should read the Product Disclosure Statement (PDS), available at www.betashares.com.au, and consider whether the Fund is appropriate for their circumstances. A Target Market Determination (TMD), which sets out the class of consumers in the target market for the Fund, is also available at www.betashares.com.au/target-market-determinations. An investment in the Fund is subject to investment risk and the value of units may go down as well as up. Betashares does not guarantee the performance of the Fund, the repayment of capital or any rate of return.
