Objective

URNM aims to track the performance of an index (before fees and expenses) that provides exposure to a portfolio of leading companies in the global uranium industry.

Benefits

Exposure to the growth potential of the global uranium industry

Nuclear energy is increasingly being accepted as a safe, reliable, low-carbon energy source and seen as a critical supplementary means of meeting the world's growing energy demands. As a result, demand for uranium to fuel nuclear power stations is projected to grow strongly.

Access to leading companies in the uranium industry

URNM provides exposure to leading global companies involved in the mining, exploration, development and production of uranium, modern nuclear energy, or that hold physical uranium or uranium royalties.

Portfolio diversification

URNM offers access to a portfolio of leading companies in the global uranium industry across a number of geographic regions, reducing stock and region-specific risk compared to investing in individual companies in the industry.
