

Betashares 2028 Fixed Term Corporate Bond Active ETF

+  **ASX: 28BB**

29 May 2026

Objective

28BB provides access to attractive returns from a diversified portfolio of high-yielding, investment-grade, Australian corporate bonds maturing in the 12 months leading up to May 2028. The Fund targets fixed monthly income payments*.

Benefits

Attractive, stable income

28BB targets fixed monthly income payments, providing predictability of cash flow.

A clear investment timeline, with daily liquidity

Like a traditional bond, 28BB has a set maturity date, when you'll receive the value (NAV) of your units. Like any ETF, you also have the flexibility to buy or sell any time prior to maturity on the ASX, with T+2 settlement.

A portfolio of bonds in one trade

28BB invests in a portfolio of bonds, giving you diversified exposure across a range of corporate issuers.

*The target distribution may vary in certain circumstances. Please refer to the PDS.

Fund returns are calculated in A\$ using net asset value per unit at the start and end of the specified period and do not reflect the brokerage or bid-ask spread that investors may incur when buying and selling units on the ASX. Returns are after fund management costs, assume reinvestment of any distributions and do not take into account income tax.

Fund information

Betashares Funds can be bought or sold during the trading day on the ASX, and trade like shares.

Distributions

12 mth distribution yield (%) 4.1%

Yield is calculated by summing the prior 12-month per unit distributions divided by the closing NAV per unit at the end of the relevant period. Yield will vary and may be lower at time of investment. **Past performance is not indicative of future performance.**

- 1 Average coupon yield of the bonds in the portfolio (weighted by market value). Subject to change over time as interest rates and constituents change.
- 2 The annualised total expected return of a bond if it is held to maturity or is called, the bond does not default, and the coupons are reinvested at the Yield To Worst (YTW). The YTW is the lower of either YTM or Yield to Call (YTC), where YTC is calculated in the same way as YTM but replacing the maturity date with the call date. The fund's YTW is the weighted average of its underlying bonds' YTWs.
- 3 The weighted average yield of the Fund's underlying holdings of fixed rate bonds. A bond's yield to maturity (YTM) is the annualised total expected return of the bond if it is held to maturity, the bond does not default, and the coupons are reinvested at the YTM. Term Yield is shown net of the Fund's management fees of 0.22% p.a.
- 4 Average length of time until the current bonds in the portfolio mature (weighted by market value).
- 5 A measure of the sensitivity of the portfolio's value to a change in interest rates, e.g. modified duration of 3 years implies a 1% rise in the reference interest rate will reduce portfolio value by 3.00%.
- 6 The total number of unique issuers held in the Fund.
- 7 The total number of securities, deposits, and bank accounts held in the Fund.
- 8 Average credit rating for the bonds in the portfolio. Credit ratings are opinions only and are not to be used as a basis for assessing investment merit. Ratings are subject to change.
- 9 The target dollar amount distribution per unit that is expected to be distributed monthly on an ongoing basis. The target distribution may vary in certain circumstances. Please refer to the PDS.
