# Introduction

## Index Objective and Highlights

The S&P Global Revenue Exposure Indices measure the performance of companies exceeding a targeted revenue exposure to certain regions or countries. Index constituents are weighted by the product of float-adjusted market capitalization and revenue exposure percentage, subject to the single stock caps defined in *Index Construction*.

The S&P Focused Revenue Exposure Indices measure the performance of stocks ranked in the top quartile of revenue exposure to the targeted region or country. Index constituents are weighted by revenue exposure percentage, subject to a single stock cap of 10%.

The S&P Exporters Indices measure the performance of stocks with foreign revenue exposure greater than 50% to certain target regions. Index constituents are weighted by float-adjusted market capitalization, subject to the single stock caps defined in *Index Construction*.

Each index series employs the FactSet Geographic Revenue Exposure (GeoRev™) database to obtain the geographical revenue breakdown of companies in each applicable index universe.

## Eligibility Factors

In order to be eligible for index consideration, the following must be met:

**Underlying Universe Index Membership.** The security must, on the rebalancing reference date be an existing member of the relevant underlying universe index.

**Revenue Region.** The company must be included in the FactSet GeoRev database. Revenue from unspecified sources is not eligible. If 100% of a company's revenue is from unspecified sources, then that company is not eligible for index inclusion.

Please refer to [www.factset.com/data/company\\_data/geo\\_revenue](http://www.factset.com/data/company_data/geo_revenue) for information on FactSet GeoRev.

**Multiple Share Classes and Dual Listed Companies.** Each company is represented once by the Designated Listing. For more information regarding the treatment of multiple share classes, please refer to Approach B within the Multiple Share Classes section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology. For S&P Exporters Indices, all publicly listed multiple share class lines are eligible for index inclusion, subject to meeting the eligibility criteria.

Securities satisfying these criteria form the selection universe.

# Index Construction

## Constituent Selection

The constituent selection process for each index is as follows:

- The average exposure percentage of the selection universe to the targeted region or country is calculated as of the rebalancing reference date. In calculating the average exposure percentage, revenue from unspecified sources is excluded.

In addition, except for the S&P/NZX 50 New Zealand Revenue Exposure Index and S&P/NZX 50 Foreign Revenue Exposure Index, all index constituents are subject to a maximum security weight of 10%. For the S&P/NZX 50 New Zealand Revenue Exposure Index and S&P/NZX 50 Foreign Revenue Exposure Index, the single stock weight cap is 15%. For companies with multiple listings in the underlying universe index, the aggregate float-adjusted market capitalization of the company's listings is used for calculation of the final weight.

*Please refer to S&P Dow Jones Indices' Index Mathematics Methodology for further details on the non-market capitalization weighted methodology.*

The focused revenue exposure indices listed below employ a non-market capitalization weighted scheme.

- S&P 500 Focused U.S. Revenue Exposure Index

The exporters indices listed below employ a capped market capitalization weighting scheme:

- S&P Eurozone Exporters Index

*Please refer to S&P Dow Jones Indices' Index Mathematics Methodology for further details on the capped market capitalization weighted methodology.*

### **Index Calculations**

The indices are calculated by means of the divisor methodology used in all S&P Dow Jones Indices' equity indices.

*Please refer to S&P Dow Jones Indices' Index Mathematics Methodology for further details on the index calculation methodology.*

# Index Maintenance

## Rebalancing

The indices are rebalanced semi-annually after the close on the third Friday of May and November. As part of the rebalancing process, constituent stock weights are updated. The rebalancing reference dates are the last business day of April and October, respectively. Weights calculated as a result of the reference date data are implemented in the indices using closing prices as of the Wednesday prior to the second Friday of May and November.

## Additions and Deletions

**Additions.** With the exception of qualifying spin-offs, no additions are made to the indices between semi-annual rebalancings.

**Deletions.** Constituents removed from an underlying universe index are also removed from the respective S&P Global Revenue Exposure Index simultaneously.

## Corporate Actions

**Spin-Offs.** Spin-offs are added to all indices of which the parent is a constituent at a zero price at the market close the day before the ex-date (with no divisor adjustment). If the spun-off company is to remain in the parent universe index, it will subsequently remain in the corresponding Revenue Index. If the spun-off company is removed from the parent universe index after at least one day of regular way trading (with a divisor adjustment), the corresponding Revenue Index will follow the same treatment.

*For further information, please refer to the Treatment of Spin-offs in S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.*

*Other corporate actions follow the S&P Dow Jones Indices' treatment for modified market capitalization weighted indices. For further information, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.*

# Index Data

## Calculation Return Types

S&P Dow Jones Indices calculates multiple return types which vary based on the treatment of regular cash dividends. The classification of regular cash dividends is determined by S&P Dow Jones Indices.

- Price Return (PR) versions are calculated without adjustments for regular cash dividends.
- Gross Total Return (TR) versions reinvest regular cash dividends at the close on the ex-date without consideration for withholding taxes.
- Net Total Return (NTR) versions, if available, reinvest regular cash dividends at the close on the ex-date after the deduction of applicable withholding taxes.

In the event there are no regular cash dividends on the ex-date, the daily performance of all three indices will be identical.

For a complete list of indices available, please refer to the daily index levels file (“.SDL”).

*For more information on the classification of regular versus special cash dividends as well as the tax rates used in the calculation of net return, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.*

*For more information on the calculation of return types, please refer to S&P Dow Jones Indices’ Index Mathematics Methodology.*

*For information on the calculation of return types specific to the S&P/ASX and S&P/NZX Revenue Exposure Indices, please refer to the S&P/ASX Australian Indices Methodology and S&P/NZX New Zealand Indices Methodology documents, respectively, available on our Web site at [www.spdji.com](http://www.spdji.com).*

# Index Governance

## **Index Committee**

The S&P Global Revenue Exposure Indices are managed by S&P Dow Jones' Index Committees. Each Index Committee meets regularly. At each meeting, the Index Committee reviews pending corporate actions that may affect index constituents, statistics comparing the composition of the indices to the market, companies that are being considered as candidates for addition to an index, and any significant market events. In addition, the Index Committee may revise index policy covering rules for selecting companies, treatment of dividends, share counts or other matters.

S&P Dow Jones Indices considers information about changes to its indices and related matters to be potentially market moving and material. Therefore, all Index Committee discussions are confidential.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

*For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.*

# Index Policy

## Announcements

All index constituents are evaluated daily for data needed to calculate index levels and returns. All events affecting the daily index calculation are typically announced in advance via the Index Corporate Events report (.SDE), delivered daily to all clients. Any unusual treatment of a corporate action or short notice of an event may be communicated via email to clients.

*For more information, please refer to the Announcements section of S&P Dow Jones Indices' Equity Indices Policies & Practices Methodology.*

## Pro-forma Files

In addition to the corporate events file (.SDE), S&P Dow Jones Indices provides constituent pro-forma files each time the index rebalances. The pro-forma file is typically provided daily in advance of the rebalancing date and contains all constituents and their corresponding weights and index shares effective for the upcoming rebalancing. Since index shares are assigned based on prices prior to the rebalancing, the actual weight of each stock at the rebalancing differs from these weights due to market movements.
