*Returns are calculated in Australian dollars using net asset value per unit at the start and end of the specified period and do not reflect brokerage or the bid ask spread that investors incur when buying and selling units on the ASX. Returns are after fund management costs, assume reinvestment of any distributions and do not take into account tax paid as an investor in the Fund. Returns for periods longer than one year are annualised.

Current performance may be higher or lower than the performance shown.

The gearing ratio of between 66.7% and 71.4% means that the Fund's geared exposure is anticipated to vary between ~300% and 350% of the Fund's Net Asset Value on a given day. The Fund's portfolio exposure is actively monitored and adjusted to stay within this range.

The Fund's returns will not necessarily be in this range over periods longer than a day, primarily due to the effects of rebalancing to maintain the Fund's daily target geared exposure range and the compounding of investment returns over time, and the impact of fees and costs.

The Fund's returns over periods longer than one day may differ in amount and possibly direction from the daily target geared return range. This effect on returns over time can be expected to be more pronounced the more volatile the Fund's underlying exposure and the longer an investor's holding period.

Investors should monitor their investment regularly to ensure it continues to meet their investment objectives.

Gearing magnifies gains and losses and may not be a suitable strategy for all investors. Investors in geared strategies should be willing to accept higher levels of investment volatility and potentially large moves (both up and down) in the value of their investment. Geared investments involve significantly higher risk than non-geared investments.
